**About Chronic Pain:** Chronic pain affects an estimated 116 million American adults – more than the total affected by heart disease, cancer, and diabetes combined. Chronic pain, which is defined as pain that lasts for more than three to six months, is a disabling condition, not simply a symptom of another disease or condition, and it can be either intermittent or continuous. For some, chronic pain is so severe that it interferes with working, eating, participating in physical activity and enjoying life.
